## Personalized Learning Surveys

Curious about what's in the Surveys? Take a look at some sample Survey items!

### Teacher K-8: Sample Learner Focused Items

How true is the statement: I build in opportunities for my students to connect what they're learning to their lives

How true is the statement: My students engage in learning activities designed for their individual needs

How often do you help your students develop their ability to think about things in multiple ways?

### Teacher K-8: Sample Learner Led Items

How many of your students could tell a visitor exactly why their work supports their learning goals?

How often do students keep track of their own learning progress in your classroom?

How often do you use student input when planning learning activities?

### Teacher K-8: Sample Learner Demonstrated Items

How true is the statement: I adjust students' grades to reflect their new learning / mastery

How often do you use what students already know to guide their work on new topics?

How often do students design or suggest new ways to demonstrate their own learning?

### Student 3-8: Sample Learner Focused Items

How true is the statement: What I learn in class connects with my life

In your class, how true is the statement: I learn how to work well with other people

How often do you talk with your teacher about things other than class work?

### Student 3-8: Sample Learner Led Items

How often do you talk with your teacher about the kinds of activities that help you learn best?

How often can you decide the order in which you complete your learning activities?

How often do you work with your teacher to decide how you will meet your learning goals?

### Student 3-8: Sample Learner Demonstrated Items

When you don't understand a topic, how often can you spend more time while other students move on?

How often does your teacher let you show what you have learned in different ways?

When you start a new topic, how often does your teacher check what you already know?

Teacher and Student Surveys include additional items that provide context and insight into the learning environment. These items ask about use of technology, flexibility in the environment, use of data, frequency of conferencing, etc.

Additionally, each survey participant can answer a set of questions about an education technology product in use in the classroom. Schools identify a product during registration if they want these questions included.
